# How use ESRI FGDB in QGIS

Step 1) Open dialog for adding a new vector layer (*Layer/Add layer/Add vector layer*)

Step 2) In the *Add vector layer* dialog select
- *Directory* option in the *Source type* part of the dialog
- *OpenFileGDB* as *Type* in the *Source* part of the dialog

Step 3) Browse source ArcGIS file geodatabase and click *Open*

Add vector layer

Source type

○ File   ● Directory   ○ Database   ○ Protocol

Encoding System

Source

Type   OpenFileGDB

Dataset ATA_works\clc2012_seamless\delivery\clc_Version_18_2.gdb   Browse

Open   Cancel   Help

Step 4)
Select layer from the list and click *OK*

Select vector layers to add...

Layer ID	Layer name	Number of fea	Geometry type
0	cha12	216467	MultiPolygon
1	clc00	2221939	MultiPolygon
2	clc06	2234409	MultiPolygon
3	clc12	1276274	MultiPolygon
4	clc90	1618918	MultiPolygon
5	cha00	243287	MultiPolygon
6	cha06	358898	MultiPolygon

OK   Select All   Cancel

Layer is added to the map window.
